# Dolphins

By: Taylor Scott

## Has anyone asked you, what's making dolphins endangered?

## Dolphin Swimming

All dolphin's swim at different speed's. Like the one people know best the bottlenose dolphin, witch swim's at 3 to 7 miles per hour.

Dolphins can dive very deep. The bottlenose witch is a shallow diver.

Dolphin's spend there hole life under water, but dolphins are not fish.

#### Breathing

Dolphins swim up to the surface in a rolling motion.

Exhales and inhales then hold's it's breath.

The bottlenose can hold it's breath 5 minutes to 10 minutes.

#### Species

- Black Dolphin
- Hector's Dolphin
- Spotted Dolphin
- River Dolphin
- Bottlenose

#### Birth

A female dolphin carries her calf for about 12 months. The calf is born tail first under water.

The calf is about three feet long at birth and 25 to 35 pounds.

The eye looking at the mother is opened, and the other is closed to help keep it from being distracted.

Dolphins eat different foods depending on were they live.

The bottlenose eats mostly fish. Other breeds of dolphins eat squid and fish.

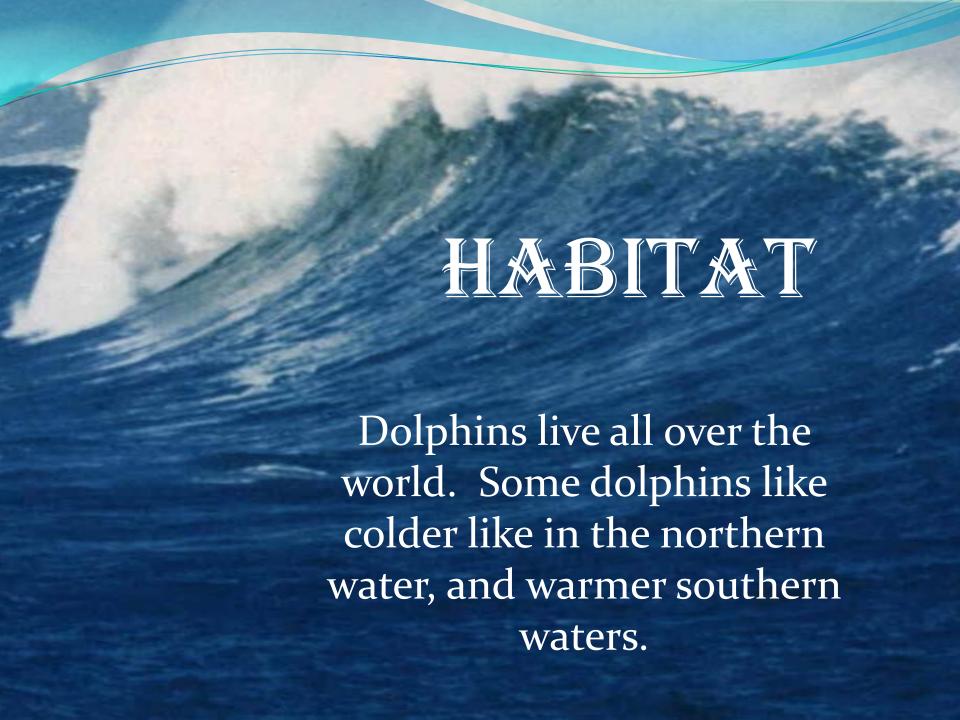

#### HUMAN INTERACTIONS

Dolphins have liked humans for many of years. Like dolphins will swim up to us, let's people pet them and helps fisherman catch fish.

Fifty year's ago people wanted to learn more about dolphin's. In fact they built a large salt water pool, then put dolphins inside.

### Endangered

You know how people asked you about, what's making dolphins endangered? I'm going to answer that.

Millions of dolphins are dying because of illegal fisher man. They are catching them in their nets and the dolphins are dying.

## Conclusion

I loved doing this power point, because dolphins are one of the most loved ocean animal. I hope you liked this and thank you for watching!
